

```
/* =====  
/* Values and Variable in JavaScript  
/* =====
```

/* In JavaScript, values and variables are fundamental concepts that form the basis of programming.

/* Values: A value is a piece of information that a program can work with. It can be a number, text,

/* Variables: A variable is a container that holds a value. It has a name and can be used to store and

// Example

```
// var welcome = "welcome to js workshop";
```

```
// console.log(welcome);
```

```
// var myAge = 20;
```

```
// console.log(myAge);
```

//! Let's test

```
// var my_Name = "Jatin";
```

```
// console.log(my_Name);
```

//!? Explanation: This is a valid variable name. It starts with a letter, and the subsequent characters

```
// var const = "12"
```

```
// console.log(const);
```

//! Explanation: This is not a valid variable name. We cannot use the reserved key as a variable name.

```
// var _myCountry$ = "India";
```

```
// console.log(_myCountry$);
```

```
// var _mycountry$ = "Indiaa";
```

```
// console.log(_mycountry$);
```

//!? Explanation: Both are valid variable names. It starts with an underscore, and the subsequent characters

```
// var 123myAge = 20;
```

```
// console.log(123myAge);
```

//!? Explanation: This is not a valid variable name. It starts with a number. Variable names cannot begin with a number.

```
// var $cityName = "Thane";
```

```
// console.log($cityName);
```

//!? Explanation: This is a valid variable name. It starts with a dollar sign, and the subsequent characters

```
// var my@Email = "jatinbhosale428@gmail.com";
```

```
// console.log(my@Email);
```

//!? Explanation: This is not a valid variable name. It includes the special character '@'. Only letters, numbers, and underscores are allowed.
